

Coatings Technology

Library Listing – 2,507 spectra

This library and the included handbook are a highly valuable resource for the analysis of a wide variety of common coating materials. It contains spectra of polymers, resins, vehicles, pigments, extenders, acrylic monomers, radiation-curable monomers, fungicides, mildewcides, inhibitors, stabilizers, solvents and other additives. Samples were prepared as capillary films, melts on KBr, cast films on KRS-5, or KBr pellets.

The Coatings Technology Library, which is comprised of 2,507 spectra of common coating materials, was prepared by the Chicago Society of the Federation of Societies for Coatings Technology and includes the revised edition of An Infrared Spectroscopy Atlas for the Coatings Industry (1991). The atlas is the fourth edition of this FSCT publication, dealing with the use of FT-IR in coatings analysis. It includes a 2-volume hardcover book set with valuable reference information on spectroscopy theory, analytical instrumentation, sampling accessories, sample preparation, spectral interpretation and quantitative analysis.

Note: Members of the Federation of Societies for Coatings Technology qualify for a 10% discount when purchasing this library. Please be sure to provide your member number when ordering.
